SKILLS

- Requirements & specifications
- Use-case definition
- Demos / POCs
- Technical discovery & scoping
- A/B testing & experimentation
- User-behavior analysis
- UI/UX collaboration
- Stakeholder communication
- SQL / ETL / Dashboards (Power BI)
- Observability
- Kubernetes / Docker / AWS (EKS)
- REST APIs / CI/CD / Git / Jira
- GenAI / LLM / AI agents / LangChain / RAG
- MLOps platforms

SOFT SKILLS

- Fast learner
- Hands-on doer
- Team player
- Pizza slayer

EDUCATION

B.Sc. Industrial Engineering & Management
Afeka College of Engineering,
Tel Aviv (2024)
Business Analytics &
Information Systems

LANGUAGES

Hebrew Native
English Full Professional

PROFESSIONAL SUMMARY

Customer-facing Solution Engineer who works with enterprise clients from evaluation through production. Analyzes and defines customer requirements, turning business goals into clear use cases and structured tasks for engineering, then delivers against them through demos, POCs, and hands-on support. Combines a product background with technical fluency in cloud and machine learning environments, and communicates clearly with both engineers and business stakeholders.

WORK EXPERIENCE

2025- Present MCKINSEY & COMPANY (IGUAZIO)

Solution Engineer

- Serve as the primary customer-facing contact for enterprise clients, guiding them from initial evaluation through adoption and production use.
- Analyze and define customer requirements, turning business goals into clear use cases and prioritized technical tasks for the product and engineering teams.
- Partner cross-functionally with engineering, product, and client stakeholders to resolve issues, improve reliability, and shape the roadmap based on real customer feedback.
- Develop demos and POCs, including GenAI and AI-agent use cases, and test them against customer requirements to validate the solution before deployment.

2022- 2025 SAP LABS ISRAEL

Solution Product Manager

- Worked directly with technical customers to uncover needs, run discovery, and scope solutions, translating what they described into requirements engineering could act on.
- Built demos that walked technical and business audiences through proposed solutions, and partnered with UI/UX to shape how those solutions actually landed for the user.
- Built the data layer and used it: ETL pipelines and dashboards (SQL, Power BI) that showed how the product was really being used, and turned that into evidence for what to build next.

CORE STRENGTHS

Business-to-technical translator:

Turns client needs into clear use cases, structured tasks, and technical documentation, and communicates in both directions.

Owns the problem end to end:

Takes client issues from first conversation through resolution in production, working with engineering to reproduce, document, and fix them.

SERVICE & COMMUNITY

IDF Intelligence Corps: Intelligence Officer (Lieutenant), Special Operations Unit; Combat commander

Volunteering: Math & English instructor (Educating for Excellence, 2024);

Math teacher (Tihon Hadash, 2021-22); Manager, Lev Ehad national emergency call center (2019).
